Code alu: SP Code darvic: PS

Code alu: PL

### **AUT - Hohe Tauern**

**BG840** Haringsee

**BG843** Ostrava

## Markings 2015

#### **IMPORTANT!**

 The bleaching must be performed on the middle part of the feather, so that the tip of each feather remains dark. This is needed for optimal contrast and recognition of the bleached feathers of flying birds at a far distance.

- Before the birds are definitely released please make sure to:
  - Check the position of visible plumage marks (number of bleach feathers)
  - <u>Take photos of both spread wings</u> from below and above (see an example in the image on the right)
  - Check the position (left/right, up/down) of the rings
  - <u>Take photos of the rings on the bird</u> making sure that all text/numbers on the rings is visible

Please send data and pictures immediately to: ibm@4vultures.org
